

ZoomLock CASE STUDY

Company: Greenhill AC

Site: Jigsaw, Bluewater Shopping Centre

Greenhill AC are using ZoomLock in Bluewater Shopping Centre to refurbish an existing shop for Jigsaw including a new AC Installation. This is a fast Track project and Hot Works are an issue in situations like this – so Glyn Shard from Greenhill AC decided to try out ZoomLock on the job.

He said “ I was slightly apprehensive at first , new technology and all that but once I’d used it on a dozen crimps it was absolutely superb. Its very quick, very efficient, obviously negating the need for braising and nitrogen”

He normally has to get a permit every day which can take him up to an hour.

He went on to say “The time and cost when compared to brazing, when you need a hot

works permit you’d have to go to the centre, get a hot work permit every day and then sign it off at the end of the day. Then in addition, there’s setting up your nitrogen for purging etc and also when you are brazing you have to wait for cool down times to put your lagging back on, there’s none of that with this, it’s absolutely superb – it even passed the pressure test with flying colours”

See more of what Glyn has to say in a short video by clicking below

For other installers working in and around city centres like London, ZoomLock offers the added benefit of being easily portable
- No gas canisters or trucks of equipment
- Just one case for everything you need.
